

**AMENDMENTS TO THE CLAIMS WITH MARKINGS TO SHOW CHANGES
MADE, AND LISTING OF ALL CLAIMS WITH PROPER IDENTIFIERS**

1. (Currently amended) ~~Rotary~~ A rotary support for mounting an electric machine in a tubular structure ~~[[5]]~~ or a bore, comprising:
a hollow-cylindrical body ~~(1) which is arrangeable~~ arranged in a radial direction between the electric machine and the tubular structure ~~[[5]]~~ or the bore, for torque transmission from the electric machine to the tubular structure or the bore~~[[,]]~~ and
~~characterized by~~
an elastic connection device ~~[[3, 7, 8] which is]]~~ arranged on the ~~an~~ outer circumference of the hollow-cylindrical body ~~[[1]]~~ for elastic connection of the hollow-cylindrical body ~~[[1]]~~ with the tubular structure ~~[[5]]~~ or the bore.
2. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of claim 1, wherein the elastic connection device ~~[[3, 7, 8]]~~ is detachably ~~connectable~~ connected to the tubular structure ~~[[5]]~~ or the bore.
3. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of claim 1 ~~[[or 2]]~~, wherein the elastic connection device ~~[[3, 7, 8]]~~ completely surrounds the circumference of the hollow-cylindrical body ~~[[1]]~~ at one or more axial areas.
4. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of ~~one of the preceding claims~~ claim 1, wherein ~~components of~~ the elastic connection device ~~[[3, 7, 8] are]]~~ has components which are spaced at even distances in circumferential direction and/or axial direction on the ~~an~~ outer surface area of the hollow-cylindrical body ~~[[1]]~~.

5. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of ~~one of the preceding claims claim 1~~, wherein the elastic connection device [[[3, 7, 8]]] has at least ~~one or more components which are component~~ made of rubber or similar elastic material ~~or are coated therewith~~.
6. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of claim 5, wherein the ~~one or more components are component~~ is a formed ~~parts~~ part of elastic, rubber-like material or solid rubber.
7. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of claim 6, wherein the formed ~~parts are O-rings~~ part is an O ring.
8. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of ~~one of the preceding claims claim 1~~, wherein the elastic connection device [[[8]]] has at least ~~one or more components component~~ of metal.
9. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of claim 8, wherein the ~~components are component~~ is a tolerance ~~finger~~ ring of a shape and radial thickness that can be modified as a result of external pressure.
10. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of ~~one of the preceding claims claim 1~~, wherein the hollow-cylindrical body [[[1]]] has fixing elements [[[2]]] on its outer circumference for securing the elastic connection device [[[3, 7, 8]]].
11. (Currently amended) ~~Rotary~~ The rotary support ~~according to~~ of ~~one of the preceding claims claim 1~~, wherein the hollow-cylindrical body [[[1]]] forms, when installed, channels or passageways in longitudinal direction with the tubular structure or the bore for circulation of the coolant.

12. (Currently amended) ~~Rotary~~ The rotary support according to ~~of one of the preceding claims claim 1~~, wherein the elastic connection device (3, 7, 8) or components thereof has a conical shape ~~or is arranged conically in relation to the length axis of hollow cylindrical body (1)~~.
13. (Currently amended) ~~Roll~~ A roll, comprising: with
a motor; and
a rotary support according to claim 11 ~~or 12~~, wherein the channels ~~[[(6)]]~~
or passageways are part of a cooling circuit.
14. (New) The rotary support of claim 5, wherein the elastic material is rubber.
15. (New) The rotary support of claim 1, wherein the elastic connection device has at least one component provided with a coating of elastic material.
16. (New) The rotary support of claim 1, wherein the elastic connection device has at least one component provided with a coating of rubber.
17. (New) The rotary support of claim 1, wherein the elastic connection device is arranged conically in relation to a length axis of the hollow-cylindrical body.
